Udyam Digital

From business needs to a tracked demo order

Self-serve acquisition with people for the exceptions

Enterprise Track A | Synthetic-data prototype

Platform Partner unstop

Start where quote drop-off hurts

- Only 368 of 5,000 supplied leads activated (7.36%).
- Needs assessed: 1,974; quotes accepted: 861. Only 43.6% make that transition.
- Priority segment: professional offices, 1,247 leads and 11.07% historical activation.
- Clinics, CA firms and coaching centres: dependable internet, email and basic security.
- Value: an understandable bundle, visible fees, fewer document hand-offs and a saved status view.

Source: supplied synthetic leads and brief. Segment priority is a proposed pilot choice, not proven optimal. · 2/7

Compete on the complete journey

- JioBusiness Solution: integrated connectivity, voice and digital services; bundles already exist.
- Vi ReadyForNext: digital-readiness assessment, tailored report and service offers; advice already exists.
- Case baseline: field-led discovery, 3-5-day quotes and document collection across channels.
- Udyam combines reviewed Hindi/English discovery, editable quotes, mock KYC and a saved tracker.
- Positioning hypothesis: reduce owner hand-offs, with consented partner help for exceptions.

Sources: JioBusiness / Vi official pages, checked 6 Nov 2026; docs/SUBMISSION_SOURCES.md. No full competitor-flow audit. · 3/7

From business needs to an editable quote

- Advisor drafts reviewed needs; catalogue rules control eligibility, dependencies and every price.
- Tier-1 clinic, five staff: Biz Fibre 100 at INR 999 + five email seats at INR 125 each.
- Monthly: INR 1,624. Setup: INR 0. First month: INR 1,624. Taxes excluded.
- Each service has a 12-month minimum contract; owner can edit quantities and add-ons.
- Review estimate, consent to four-document checks, then create and track a simulated order.

Source: catalogue/quote code at build time. Starter bundle, not a budget optimizer or real commercial offer. · 4/7

Rules, privacy and people protect trust

- React -> FastAPI -> catalogue/mock registries + SQLite. Consented Gemini drafts require review.
- Separate consents for drafting, speech, documents and partner contact; images never saved.
- Raw fields expire after 30 minutes or order submission; masked journey records after 24 hours.
- Account ownership and staff roles limit access. Partners see assigned, consented summaries only.
- Original inspection can resolve legibility; missing, expired or inconsistent evidence still blocks.

Rollout gates and risks

- Now: working synthetic prototype; regression checks cover access, consent, navigation and recovery.
- Provider risk: verify live extraction/voice; preserve inputs and guided fallback during outages.
- Deployment risk: validate Docker/CI, managed identity, encrypted hosting and operating controls.
- Delivery risk: real availability, payment and provisioning need integrations; current stages are simulated.
- Next: invited professional-office pilot with partner support and a comparable baseline; WhatsApp stays disabled.

Five proposed targets, not claimed results

- Lead-to-activation: historical 7.36%; proposed comparable-cohort target 10%.
- Mean lead-to-activation: 17.62 days; proposed target at most 12 days.
- Blended acquisition cost: INR 15,053; proposed target at most INR 12,000.
- Six-month churn: 15.22%; proposed target at most 12%. Status chases: about 3 to at most 1.
- At fixed acquisition spend only, 7.36% to 10% conversion implies about INR 11,079 CAC.

Scenario arithmetic, not measured savings. Segment pilots need their own comparable baseline; churn needs six months. · 7/7
